

Connect and Print – Zebra Card SDK for ZXP Series 1 and Series 3 Printers – C#

This sample application demonstrates how to use the Zebra Card SDK for ZXP Series 3 and Series 1 Printers to connect a ZXP Series 3 printer or Series 1 printer and then print a card.

Note: Installation of both the ZBRPrinter.dll and ZBRGraphics.dll SDKs is required prior to compiling and running this sample application. Download the SDK [here](#).

The application was developed using Visual Studio 2008 on Windows XP, using the Zebra Card SDK for ZXP Series 3 and Series 1 Printers. This sample code is also applicable to all new versions of Visual Studio released after 2008. The sample code was updated to use Visual Studio 2017.

Note: This application is provided AS-IS, for example purposes only.

For more information on developing card printer solutions, go to [Getting Started with ZXP Series 3 Card Printer Development – ZXP3 SDK – C#](#).
